

VITALIS

Round 1:

Delegate Cap: 2 - 3

Question and Answer based round designed to test both biological knowledge and quick thinking. Questions will focus on recognising connections between biological terms, arranging processes in the correct sequence, identifying incorrect associations, and applying concepts under time pressure.

Note:

This is an elimination round.

Round 2:

Note: This round will have two phases

Delegate Cap: 2

Phase 1:

This opening round is a quick, high-stakes biology quiz where your team will answer questions displayed on a projector screen. Your team gets to answer 4 questions total, with a strict 30-second timer for each question to discuss and give one final answer through your spokesperson. Questions will be grouped in four categories. Each category of question will have a set number of points ranging from 10 to 40. As the number of points increases, so does the difficulty level.

Teams are required to simply pick a category of point value and answer a question. Getting an answer right awards those points, while a wrong answer or running out of time gives you 0 points, there is no negative marking. Most importantly, the points you earn here are **ONLY** used as 'money' to buy medical lab reports in phase 2 of this round; they do **NOT** count toward your final overall category score.

Phase 2:

In this phase, your team steps into the role of attending physicians taking on a complex medical case.

Your goal is to evaluate an initial patient file, strategically spend the points your team earned in Phase 1 to unlock diagnostic lab reports, accurately diagnose the underlying illness, and present your findings and treatment strategy to a panel of medical judges.

All analysis in this round must rely strictly on your team's prior biological and medical knowledge, as no internet access or external reference material will be permitted. The points you accumulated during Phase 1 will function as your team's available balance for purchasing diagnostic tests. You may only buy a report if you have enough points to cover its cost, and once your balance runs out, you must rely entirely on the evidence you have already unlocked. Leftover points will not be converted into additional score bonuses, nor will they negatively affect your final tally. You can buy as many reports as you want as long as you have sufficient balance for it.

This round begins with a 5-minute Initial Case Analysis, during which every team receives a free basic Patient File detailing the individual's medical history, and presenting symptoms. Use this time to brainstorm potential diagnoses and agree on the exact list of diagnostic tests your team wants to purchase. Right after the 5-minute analysis phase ends, 1 delegate from each team will step up to the Category Head to request all desired lab reports at once. The Category Head will verify your team's point balance and hand over all requested report sheets if you have sufficient points to purchase them.

Teams will have 10 minutes after this to analyse the material they are provided with and make a presentation. Teams will have 5 minutes to present and must clearly state the medical diagnosis and treatment plan along with a clear justification backed by specific facts from your lab reports and patient history. You should explain how your test results ruled them out and why you chose you conduct those tests.

Note: This is an elimination round.

The judging criteria is:

- Diagnostic Accuracy & Reasoning and Justification of Diagnosis
- Treatment plan
- Selection of lab reports
- Presentation style

Round 3:

This is a Surprise Round. Details for Round 3 will be revealed on the spot at the start of the session.

Note: This category is subject to change at the discretion of the Category Heads.
