

ASTROMANIA

Welcome to Astromania, Enova's flagship astronomical proving ground where cosmic curiosity, scientific debate, and futuristic engineering collide! This category pushes your space exploration limits through rapid-fire astronomy quizzes, high-stakes planetary debates, and visionary space settlement design challenges. Victory demands deep celestial knowledge, persuasive eloquence, and relentless structural adaptability under pressure, so launch your imagination and command your intellect to conquer the cosmos.

Round 1 : The Cosmic Escape

ROUND DURATION: 2 Hours

DELEGATE CAP:1- 3

The Cosmic Escape transforms the night sky into a high-stakes, multi-stage escape challenge where your team works together to crack codes and unlock each new phase. Over two fast-paced hours, you and your crew will face a mix of hands-on challenges: decryption puzzles, logic games, interactive tasks, and rapid pop quizzes. You won't need deep knowledge in astrophysics to survive, but a sharp eye for identifying major constellations and a basic handle on fundamental space facts will definitely give you an edge. Success here comes down to quick mental reflexes, smooth teamwork, and how fast you can divide up clues to solve each puzzle before the two-hour clock runs out!

Round 2 : Stellar Strife

ROUND DURATION: 3 hours

DELEGATE CAP: 2

This round is a live debate designed to see how well you can build an argument and defend your stance under pressure. You do not need to stress about studying a specific list of subjects beforehand, as the exact topic will be revealed right on the spot. Once the theme is announced, you will have a limited amount of time to gather your thoughts, structure your points, and get ready to challenge your opponents. Success here is all about quick critical thinking, clear communication, and the ability to adapt your arguments on the fly

Round 3 : The Final Frontier

ROUND DURATION: 3 Hours

DELEGATE CAP: 1-3

Last round of the competition brings you to the ultimate test of creativity and futuristic engineering. In this round, you will step into the shoes of aerospace visionaries to design a fully functional space settlement. This is your chance to think outside the box and tackle the real-world challenges of sustaining human life in the harsh environment of space. You will need to balance scientific reality with imaginative design, thinking through everything from life support systems and artificial gravity to community layouts and resource management. There is no single correct answer here, so focus on creating a cohesive, logical, and inspiring blueprint that proves humanity can thrive among the stars

Note:

- RFP(Request For Proposal) would be provided by day 2
- The presentation is to be submitted before the final round starts.
- Use of AI is strictly prohibited and would lead to disqualification.
